#### **Summary:**

Couvillion Group's Rapid Response Collection System initiated its forty-fifth collection cycle on 11/2/2022 and completed the cycle on 12/2/2022 resulting in a collection duration of 29.6 days. Using the OSV Brandon Bordelon the collected hydrocarbon fluid that was recovered from the subsea oil containment vessels was taken to the Couvillion Dock in Port Fourchon, Louisiana. Vessel to Dockside Transfer commenced on 12/3/2022, with 621.7 bbl of hydrocarbon fluids transferred to onshore frac tanks 1 and 2 according to NRC frac tank strapping.

On 12/19/2022, Couvillion Group confirmed the initial measurement of 621.7 bbl of hydrocarbon fluids in frac tanks 1 and 2 via strap measurements. After a confirmation measurement was recorded, the decanting process began. From frac tanks 1 and 2, a total of 18.5 bbl of water was decanted. This 18.5 bbl of water was sent to the third frac tank for disposal at a later time. A gross total of 590.4 bbl of fluids according to NRC strapping measurements was sent to Acadiana oil using tank trucks from frac tanks 1 and 2. After temperature and BS&W deductions a net total of 549.0 bbl of oil was transferred from tanks 1 and 2 in the Port Fourchon yard to the Acadiana Oil Company.

Along with the processing of frac tanks 1-2 Couvillion Group processed the 4<sup>th</sup> frac tank which is referred to as the residual tank. The residual tank had an initial volume of 209.5 bbl of hydrocarbon fluids. A total of 135.2 bbl of water was decanted out of the frac tank and sent to the third frac tank for disposal at a later time. Following the decant process, 62.5 bbl of hydrocarbon fluids were sent to Acadiana Oil in Berwick, La. After temperature and BS&W deductions a net total of 61.4 bbl of oil was transferred from tank 4 in the Port Fourchon Yard to the Acadiana Oil Company in Berwick, Louisiana. After processing was completed 11.8 bbl of hydrocarbon fluids were left in the 4<sup>th</sup> frac tank for processing at a later date. Total fluid reconciliation for frac tank 4 was within 0.0%

#### **Procedures Followed:**

Couvillion Group and the associated companies participating in the collection and transportation of hydrocarbon fluids from the MC-20 site to the Acadiana Oil Company site have compiled a set of procedures that are followed throughout the process. The MC20 Response Disposal Plan with associated documentation pertaining to custody transfer and hydrocarbon fluids measurements for this report are in Appendix I. Appendix II includes the NRC waste handling documentation.

#### **Execution:**

#### Offshore Collection of Hydrocarbon Fluids at MC 20 Site:

The Brandon Bordelon OSV moved in place on location at MC20 on 11/29/2022 at 09:40 hrs. An asfound ROV survey was conducted prior to commencement of pump off operations. To begin pump off operations ROV's were launched and thereafter the hydraulic subsea pump and hoses were over boarded. The inlet hose to the hydraulic subsea pump was connected to the offload outlet on the subsea oil storage containers. On 11/29/2022 the ATI/BTI were closed at 12:27 and pumping commenced at 08:00 hrs on 11/30/2022. On 11/30/22 at 09:20, operations were stopped due to harsh weather conditions and ATI/BTI were reopened. After the weather dissipated, work was resumed and ATI/BTI were closed at 2:09 on 12/2/22, marking the end of the 45<sup>th</sup> collection cycle. Pumping operations ended at 8:25 on 12/2/2022. Fluids were sampled on the vessel every 20 minutes for field analysis to determine the estimated oil to water ratios until water breakthrough occurred and collection operations were then stopped. A total of 625.5 bbl of hydrocarbon fluid was collected according to the tank strap measurement taken offshore. Upon pump off completion the hoses and pump were surfaced and flushed with saltwater that was sent to a filtration system for treatment and over boarding.

#### **Vessel to Dockside Transfer**

The Brandon Bordelon arrived at the Couvillion Dock in Port Fourchon, Louisiana on 12/3/2022. On the morning of 12/3/2022 hoses were run from the tanks on the vessel through a diaphragm pump and then run to 500 bbl frac tanks. The pump-off process was begun and continued until all MPT tanks aboard the OSV Brandon Bordelon were empty. Tankermen from Team Services verified that the MPT tanks onboard the vessel was emptied, then an NRC representative strapped the dockside frac tanks to determine **the total quantity transferred which was 621.7 bbl.** With the dockside transfer complete, the fluid was allowed to settle out water from the oil over a period of time before the transfer of the oil from the frac tanks to tank trucks.

#### **Dockside Frac Tanks to Truck Transfers**

On the morning of 12/20/2022 at 07:00 hrs the first round of frac tanks to tank truck transfers commenced. A hose was attached to the frac tank and ran through a diaphragm pump into a tank truck. Pumping commenced and the first truck received 144.9 bbls, the second truck received 150.3 bbls, and the third truck received 149.5 bbls of hydrocarbon fluids. The second day of truck transfers began on 12/21/2022 at 07:00. The final truck of pumpoff 45 received 145.7 bbls of hydrocarbon fluids. There was a total of 12.8 bbls of residual fluids which remained in frac tanks 1 and 2 and was later pumped into tank 4. All values were recorded in the appropriate forms in the MC-20 Response Disposal Plan (see report Appendix I). Total fluid reconciliation for frac tanks 1-3 was within 0.0%.

#### **Truck to Facility Transfer**

Upon arrival at the Acadiana Oil Company site each truck enters a loading bay. Before any fluids are transferred an Acadiana Oil Representative straps their tank for an initial measurement and then transfer of fluid begins. While the pump off is underway an Acadiana Oil Company Representative takes three fluid samples during the transfer process from the pump outlet from which hydrocarbon fluid is flowing. These samples are taken at the beginning of the transfer, mid-way through the transfer, and at the end of the transfer process to ensure a full mixture. The sample is then taken to their testing area where tests are run to determine: % BS&W content, temperature, and specific gravity. Temperature and specific gravity are recorded via the use of a hydrometer, while BS&W content is determined via the use of a centrifuge with a 50/50 mixture of the sample with mineral spirits. Once all sampling is completed and recorded (see copy in Appendix I) the Acadiana Oil Company Representative again straps their tank to obtain a post transfer level. The gross fluids that are recorded is determined by subtracting the initial pump off tank strap level from the post transfer tank strap level. This gross fluid value is corrected for temperature, specific gravity and BS&W content to determine the net oil value that is recorded. This process is repeated for each truck offload.

#### **Summary Tally and Running Totals:**

The tables below show an oil tally, a total fluid reconciliation, and a flow rate calculation. In total 621.7 bbl of hydrocarbon fluid was transferred from the Brandon Bordelon into an onshore frac tank. Tank trucks transported a gross total of 590.4 bbl to the Acadiana Oil Company, which netted out to a total of 549.0 bbl. From a total fluid reconciliation standpoint, measurements at different site locations were within 0.0% for frac tanks 1-3. The calculated flow rate during the 29.6-day collection cycle offshore was 18.5 bbl/day or 777.0 gal/day. Monthly pump off collection rates reflects collection rates which are not inclusive of product that remains in the residual tank. This causes monthly collection rates to appear slightly lower than the historic average. As of the end of this pump off campaign 1,155,441.0 gallons of salvaged crude oil has been contained from the MC-20 site.

#### Oil Tally

## Job Hazard Analysis

Potential Hazards

Revision: 08/2015 Preventive Measures / Special PPE awareness when walking in the dock area. Try to run hoses in an area that is out of the normal walking path and go around if possible Calibrated multi-gas meters/detectors will be used to confirm

| the state of the s | I was a second   | go around if possible  |
|--|--|--|
| Working in potentially hazardous atmospheres   | <ul> <li>Personnel exposed to hazards related to hazardous atmospheres.</li> <li>Ignition sources create potential for explosive conditions</li> <li>Personnel not equipped to suppress incipient fire</li> </ul>  | <ul> <li>Calibrated multi-gas meters/detectors will be used to confirm that LEL's, CO and other gases are within safe range for pumping and transfer operations. Operations will transfer operations will stop immediately if LEL's or Carbon Monoxide levels become elevated</li> <li>A protective distance of 100' outside shoreside transfer will be identified, and marked with caution tape and warning signs, to prohibit smoking, sparks and any potential source of ignition within the transfer area perimeter. The M/V will suspend all similar activities for the duration of transfer operations.</li> <li>Fire extinguishers will be placed at the transfer manifolds, compressors, vessel and any other areas of potential ignition.</li> </ul>  |
| 7. Energizing pneumatic equipment  | Personnel injured when struck by hoses or pressure during hose connection or fitting failure. Air leaks or blowout causing pressure related injuries. Hearing loss/injury due to noise levels above 85 decibels  | <ul> <li>All pressurized hoses will have whip checks and safety clips installed prior to energizing. All pneumatic hoses will be inspected prior to use.</li> <li>Pumping operations will be stopped immediately if leaks are detected during operations. Defective hoses will be replaced with new hoses/whips.</li> <li>Hearing protection will be worn in all areas where highnoise machinery and equipment is being operated.</li> </ul>   |
| Transfer of recovered crude oil  | Personnel contacted by crude oil spray or environmental release.  Overfilling tank resulting in spills  Personnel overcome by potentially hazardous vapors   | <ul> <li>All transfer hoses used will be inspected, certified and tested prior to use. They will be secured with safety clips and wrapped with absorbent pads and duct tape. Polypropylene line will be used as an added retention measure. Personnel will wear Level D PPE and increase protection as appropriate. Spill control kits/supplies will be available on site. The DOI Declaration of Inspection will be completed prior to operations.</li> <li>Prior to transfer the amount of product that can be accepted will be calculated and the PIC will ensure that there is ample room to handle the transferred product.</li> <li>Crude oil is a mixture of various hydrocarbons. Among them can be benzene, hydrogen sulfide, and other chemicals. There will be a properly calibrated and bump tested 4-gas meter on site during transfer to ensure vapors aren't present. All work will stop if hazardous gasses are detected. PPE will be upgraded according to the concentration of hazards detected.</li> <li>If personnel will work at heights above 6': fall protection will be worn and a rescue plan will be in place.</li> <li>Fire extinguishers will be placed at the transfer manifolds, compressors, vessel and any other areas of potential ignition.</li> </ul> |
| Transfer of oil into transporter   | <ul> <li>Personnel contacted by crude oil spray or environmental release</li> <li>Overfilling transportation vessel resulting in spills</li> <li>Personnel overcome by potentially hazardous vapors</li> <li>Fall hazards present if personnel are working above 6 feet</li> </ul> | <ul> <li>All transfer hoses used will be inspected, certified and tested prior to use. They will be secured with safety clips and wrapped with absorbent pads and duct tape. Polypropylene line will be used as an added retention measure. Personnel will wear Level D PPE and increase protection as appropriate. Lady of the Sea Hospital: Galliano, LA (985) 632-6401

#### SITE DESCRIPTION / WORK SUMMARY

The site is the Port Fourchon Facility: 554 Dudley Bernard Rd. Port Fourchon, LA. 70357 (985) 396-4518

NRC will facilitate removing recovered crude oil from the well located at MC20 project. The M/V collecting crude oil from the location and storing it on Marine Portable Tanks (MPTs) located on her deck. The vessel will be moored to the dock at the above location and transfer the recovered crude from the MPTs on her deck to double walled frac tanks on the dockside.

Once the frac tanks on the Port Fourchon docks are ready for transfer the crude will then be transferred into bulk transporter trailers to be sent to its final destination.

#### SCOPE OF WORK

will send a 100' section of 3-inch petroleum duty hose to the dock where it will be connected to the hoses leading to a properly rated and tested manifold. The manifold has one inlet and three outlets. Each outlet will be fitted with a 3-inch transfer hose and affixed to the frac tanks. Once the connections are secured and the declaration of inspection (DOI) is complete, the vessel will transfer the crude oil in her tanks using a 4-inch pneumatic diaphragm pump. As the frac tanks near capacity the dockside operator will open the next manifold valve and close the active one. This process will continue until all three frac tanks are at capacity. Once the transfer is complete a 1-inch airline with the proper fitting will be given to the M/V's crew to send compressed air up the hose to "blow down" any residual product left in the hoses to ensure no product is spilled when the hoses are disconnected.

After the crude oil sits in the frac tank at the Port Fourchon Dock for 12 to 24 hours the crude oil will be pumped using a 3-inch pneumatic diaphragm pump to transport trailers to be sent to final destination.

Job Hazard Analysis

| O Job Steps                                  | Potential Hazards   | Preventive Measures / Special PPE   |
|--|---|---|
|  |   | <ul> <li>detected. PPE will be upgraded according to the concentration of hazards detected.</li> <li>If personnel will work at heights above 6': fall protection wibe worn and a rescue plan will be in place.</li> <li>Fire extinguishers will be placed at the transfer manifolds, compressors, vessel and any other areas of potential ignition.</li> </ul>  |
| Prolonged exposure to elements (Heat Stress) | Inadequate hydration     Extended work periods without rest resulting in heat stress  | <ul> <li>Personnel will be encouraged to hydrate frequently. Water t sports drink ratio will be 3:1 (1 sports drink to 3 waters consumed).</li> <li>Work to rest schedules will be determined based on the ambient temperature, acclimatization of personnel and work being performed. Heat stress potential and signs/symptoms will be discussed at all safety meetings, tailgate meetings and during breaks. Personnel will be encouraged to self-report any early symptoms of heat stress. All personnel will be advised that stop work authority applies to potential heat stress symptoms they may be experiencing, (or that they suspect with coworkers).</li> </ul>  |
| 11. Break time                               | <ul> <li>Potential for ingestion of petroleum product or other contaminants.</li> <li>Fire hazards from unrestricted smoking</li> <li>Direct sun reduces recovery time for workers during breaks</li> <li>Inadequate water</li> </ul> | <ul> <li>Personnel will wash hands before smoking, eating, drinking or any other activity where contaminants might be ingested. This hazard will be stressed in break areas.</li> <li>Only smoke in designated areas.</li> <li>Ensure that break areas have adequate shade and cooling potential for personnel</li> <li>Personnel are more likely to hydrate when cool water is available. Ensure an adequate supply and include sports drinks with electrolytes to be consumed sparingly.</li> </ul>   |
| 12. Decontaminate Personnel                  | Potential for secondary<br>contamination by absorption,<br>injection, or ingestion  | <ul> <li>Follow decontamination plan for clothing removal and disposal when protective outerwear is required and becomes contaminated.</li> <li>Only use safety scissors (never knives) to cut Tyvek from personnel.</li> <li>Ensure that workers wash hands and face thoroughly.</li> </ul>  |
| NRC INCIDENT REPORTING POLICY                | First Aid     OSHA recordable     Illness/Injury     Near Miss     Equipment/Vehicle Damage   | <ul> <li>NRC employees and subcontractors are required to immediately report all incidents to their supervisor.</li> <li>The immediate supervisor will immediately report the incident to the site safety professional, HSEQ Manager, and Project Manager.</li> <li>As soon as possible the affected employee will complete the required form, if an injury then the first report of injury; if near mlss, then a near miss / safety suggestion form will be completed.</li> <li>The supervisor will complete a root cause analysis of all reported incidents and submit to the HSEQ manager within 8 hours of an incident.</li> <li>Determination will be made regarding need for post-incident drug and alcohol testing based on NRC policy.</li> <li>Contact HSEQ Manager for proper USCG reports, if needed and what report is needed.</li> </ul> |

Job Hazard Analysis

| O Job Steps                                  | Potential Hazards   | Preventive Measures / Special PPE  |
|--|---|--|
|  |   | awareness when walking in the dock area. Try to run<br>hoses in an area that is out of the normal walking path and<br>go around if possible  |
| Working in potentially hazardous atmospheres | Personnel exposed to hazards related to hazardous atmospheres. Ignition sources create potential for explosive conditions Personnel not equipped to suppress incipient fire   | <ul> <li>Calibrated multi-gas meters/detectors will be used to confirm that LEL's, CO and other gases are within safe range for pumping and transfer operations. Operations will transfer operations will stop immediately if LEL's or Carbon Monoxide levels become elevated</li> <li>A protective distance of 100' outside shoreside transfer will be identified, and marked with caution tape and warning signs, to prohibit smoking, sparks and any potential source of ignition within the transfer area perimeter. The M/V will suspend all similar activities for the duration of transfer operations.</li> <li>Fire extinguishers will be placed at the transfer manifolds, compressors, vessel and any other areas of potential ignition.</li> </ul>  |
| Energizing pneumatic equipment               | Personnel injured when struck by hoses or pressure during hose connection or fitting failure. Air leaks or blowout causing pressure related injuries. Hearing loss/injury due to noise levels above 85 decibels                     | <ul> <li>All pressurized hoses will have whip checks and safety clips installed prior to energizing. All pneumatic hoses will be inspected prior to use.</li> <li>Pumping operations will be stopped immediately if leaks are detected during operations. Defective hoses will be replaced with new hoses/whips.</li> <li>Hearing protection will be worn in all areas where highnoise machinery and equipment is being operated.</li> </ul>   |
| Transfer of recovered crude oil              | Personnel contacted by crude oil spray or environmental release. Overfilling tank resulting in spills Personnel overcome by potentially hazardous vapors  | <ul> <li>All transfer hoses used will be inspected, certified and tested prior to use. They will be secured with safety clips and wrapped with absorbent pads and duct tape. Polypropylene line will be used as an added retention measure. Personnel will wear Level D PPE and increase protection as appropriate. Spill control kits/supplies will be available on site. The DOI Declaration of Inspection will be completed prior to operations.</li> <li>Prior to transfer the amount of product that can be accepted will be calculated and the PIC will ensure that there is ample room to handle the transferred product.</li> <li>Crude oil is a mixture of various hydrocarbons. Among them can be benzene, hydrogen sulfide, and other chemicals. There will be a properly calibrated and bump tested 4-gas meter on site during transfer to ensure vapors aren't present. All work will stop if hazardous gasses are detected. PPE will be upgraded according to the concentration of hazards detected.</li> <li>If personnel will work at heights above 6': fall protection will be worn and a rescue plan will be in place.</li> <li>Fire extinguishers will be placed at the transfer manifolds, compressors, vessel and any other areas of potential ignition.</li> </ul> |
| 9. Transfer of oil into transporter          | Personnel contacted by crude oil spray or environmental release Overfilling transportation vessel resulting in spills Personnel overcome by potentially hazardous vapors Fall hazards present if personnel are working above 6 feet | <ul> <li>All transfer hoses used will be inspected, certified and tested prior to use. They will be secured with safety clips and wrapped with absorbent pads and duct tape. Polypropylene line will be used as an added retention measure. Personnel will wear Level D PPE and increase protection as appropriate. #### DECLARATION OF INSPECTION LOCATION & NAME OF FACILITY Consillion (GES 1384 12-03-22 Port rounchou NAME OF VESSEL DATE TRANSFER OPERATIONS STARTS Doedelow BRANCION An oil transfer operation may not commence to or from a vessel unless the following requirements are met and agreed upon by the respective transferring and receiving persons in charge. Persons in charge indicate by a check (√), in the appropriate spaces, that the specific requirement has been met. VESSEL FACILITY A. The mooring lings are adequate for all anticipated conditions..... C. Cargo hoses are adequately supported to prevent undue strain on the couplings. D. The transfer system is properly lined up for discharging or receiving oil. (Additional checks shall E. Each flange connection on the cargo system not being used during the transfer operation is blanked F. The cargo hoses and/or loading arms are connected to the manifolds using gaskets and a bolt in every other hole, (minimum of 4 bolts). Exception: Tanks without fixed loading systems per waiver H. Adequate spill containments have been provided for couplings..... J. A communications system is provided between the facility and the vessel..... K. Emergency shutdown system is available and operable..... L. Communication procedures are established and understood between persons in charge..... M. Qualified and designated personnel are in charge and on duty at the terminal and vessel control stations. . N. One person at the vessel control station is present who fluently speaks the language of the terminal control O. The owner of the cargo hoses will insure test requirements have been met and that the hose has no loose covers, kinks, bulges, soft spots or gouges, cuts and slashes which penetrate the hose reinforcement and Q. Persons in charge have held a conference to assure the mutual understanding of the following transfer operations: ...1. Product identity to be transferred....... ...2. Sequence of transfer operation..... ...4. Name or title and location of each person participating in the transfer operation ..... ...5. Particulars of the transferring and receiving systems ..... ...8. Watch and shift arrangements ..... 3 The following items are to be filled out by Vessel personnel only. Warning signs and read warning signals (35.35-30). .2. Repair work authorization (35.35-30).

I certify that I have read, understand and agree with the foregoing as marked and agree to begin/continue the transfer operation.
